INDEX OF PAPERS PUBLISHED IN ANTHROPOLOGIE 1962–2002

EDITOR'S NOTE

Anthropologie, International Journal of the Science of Man, has a long tradition. It has been founded two times by widely known and internationally recognised Czech anthropologists: the Journal was first founded in 1923 by Jindřich Matiegka (1923–1941), Charles University, with the support of Aleš Hrdlička; it was revived in 1962 by Jan Jelfínek who edited the Journal for more than thirty years (till 1995). Both of them strongly preferred evolutionary topics, elaborated by a broad spectrum of scientists from both Western and Eastern countries. Both of them welcomed interdisciplinary papers from both science and social science. This tradition has developed a good basis for the recent aims and scope of the Journal.

The main aim is to publish papers focused on various problems of hominid evolution and phylogeny, and human variability in the broadest sense. To keep international communication across the topics, all the papers are published in English, French or German. The Journal is open to both concrete paleoanthropological or archaeological papers and theoretical ones. Anthropologie is ready to publish papers of scientists from any country and any age, able to submit an interesting paper on a reasonable scientific and formal level. In connection with this, the Journal will continue its tradition to help the scientists who are not native speakers with their English. The journal will bring together most varied opinions of European and overseas researchers with a special attention to the evolution of hominids in the European and Mediterranean regions. Accordingly, Anthropologie regularly presents also monothematic volumes concentrating opinions on specific current topics in hominid evolution and variability, which is its well-established tradition since the 1970s.

The scope of the journal is basically given by the scope of contemporary evolutionary anthropology, paleoanthropology, historical anthropology and paleopathology, Paleolithic cultures, arts, social and cultural anthropology, growth and development, functional anthropology, clinical anthropology, archaeology of the Mesolithic, Eneolithic, Neolithic and Bronze Age, and various other aspects of hominid evolution, including theoretical aspects of hominid evolution and related topics of growth and molecular anthropology. Similarly, most primatological topics, except of primate conservation and systematics as well as medical and veterinary primatology, will be regularly published in Anthropologie. Papers on topics relating to social and cultural anthropology, human ethology and art, or papers dealing with variability and adaptation of human populations, as related to hominid evolution, will also be published – namely in specialised monothematic volumes. Among all the topics of hominid evolution, those on the evolution of the genus *Homo* in

European and Mediterranean regions will be preferred. Primate ontogeny and behaviour belong also to topics of importance for the Anthropologie journal. Any topics from applied human biology, medical anthropology and all other branches of applied anthropology, as well as specialised social science topics, are not supposed to be published in the Journal.

On the occasion of the 40th published volume of Anthropologie, we are bringing a summary index of contributions from the so far published issues of the Journal.

I would like to thank Petr Neruda for preparation and compilation of the index, Patrik Galeta for elaboration of statistical data on the published articles, and Kateřina Tlachová and Pavla Seitlová for cooperation in completing the whole index.

5. Frequency of first author nationality in Anthropologie journal in the four decades between 1962–2002; a – Czech and others; b – Czech and more frequent nationalities.

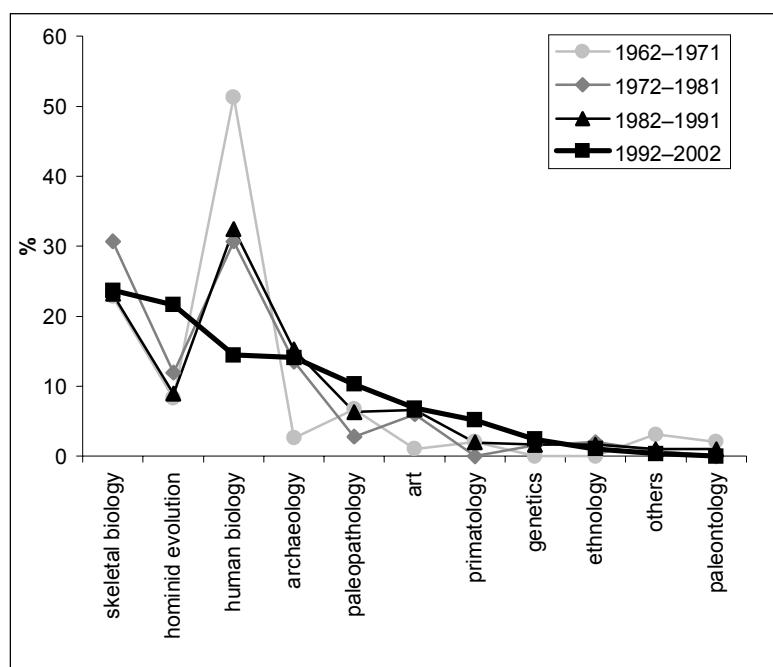

6. Frequency of first author nationality in Anthropologie journal in the four decades between 1962–2002.

a)

Topical area	Note
skeletal biology	skeletal remains assessment, bone and teeth morphology and variation, diet, paleodemography, age and sex estimation methods, biomechanics, bone chemistry
hominid evolution	Miocene, Pliocene and Pleistocene evolution, origin and evolution of the genus <i>Homo</i> , origin and evolution of modern humans, hominid skeletal remains
human biology	growth, development, variation, dermatoglyphics, adaptation, reproduction
archaeology	Paleolithic cultures, archaeology of Mesolithic, Eneolithic, Neolithic and Bronze Age, stone tools, dwelling structures, textiles, pottery, interdisciplinary analyses in archaeological context (geoarchaeology, paleoclimate, palynology)
paleopathology	paleopathology from past to present
art	rock and mobile art, dance, music
primatology	primate ecology and biogeography, etiology, ontogeny, life history, functional morphology, comparative anatomy, sexual dimorphism, locomotion
genetics	populational genetics, molecular genetics, genetic variation
ethnology	ethnology of hunters-gatherers, social organization, cult
others	education, history of anthropology
paleontology	faunal remains, modification of animal bones, domestication

b)

	1962–1971	1972–1981	1982–1991	1992–2002
skeletal biology	23	31	23	24
